

NANOTECHNOLOGY SCHOOL KITS FOR MIDDLE AND HIGH SCHOOL EDUCATION Product # EK-01

With these materials – a tongue depressor with a Velcro strip, white and black Velcro buttons – and several safe chemicals, you will be able to investigate nanomaterial self-assembly safely and inexpensively in your classroom.

Product Features

- The experiments are designed for middle and high school science classes. The kits allow students to build their confidence in this highly technical field because they can fabricate samples many times with approximately the same results, regardless of small experimental errors.
- The kit offers students the chance to perform experiments using a modified electrostatic self-assembly (ESA) process. ESA is an exciting new nanotechnology technique for creating materials at the molecular level.
- This kit contains the materials necessary for 24 students working in groups of four to complete experiments, and includes instructions, student worksheets, teacher aids, and a resource CD.

Products for research and development use only. Except where specifically enumerated by NanoSonic, Inc. by contractual agreement, all nanomaterials are for use in a research and development context only. They are not to be incorporated into commercialized food, household, cosmetic, or other applications where the buyer is not the end user. Further, materials sold by NanoSonic, Inc. are for the buying entity to use in an end-user context only. Only those individuals with proper technological background and training are permitted to work with NanoSonic nanomaterials, while using appropriate protective precautions. For further information, please consult the product MSDS, provided with each order and available upon request.
